Step 1: Travel Screen

Patient arrives at facility

Earliest point of contact administers travel questionnaire

**Patient Questions:**
- Have you traveled to China in the last 14 days?
- Have you been in contact with someone who has traveled to China in the last 14 days who is now ill?

Yes to either

Hospital-Based Setting
- If yes, travel screen is positive:
  - Provide patient with mask
  - Immediately contact clinical resource designated for your area* to proceed with symptom screen and triage.
  - Clinical resource dons contact and droplet PPE (gloves, gown, and mask) for screening

Clinic-Based Setting
- If yes, travel screen is positive:
  - Provide patient with mask.
  - Escort patient to room designated at your clinic for this purpose.
  - Immediately contact clinical resource designated for your area* to proceed with symptom screen and triage.

All Settings
- If no, Proceed with registration, check-in, triage or care.

* Don’t know who this would be in your area? Ask your manager.
### Step 2: Symptom Screen

If positive travel screen, Designated clinical resource dons PPE and escorts patient to isolation room to conduct symptom screen.

Does patient complain of or cite any of the following:

- Fever above 101 F
- Cough or other lower respiratory symptoms

Yes to any

No to all

**Clinic-Based Settings**

If no symptoms identified, primary physician should consult with infection prevention and infectious disease to determine appropriate plan.

If no,

- Proceed with registration, check-in, triage or care.
- Provide patient with educational materials regarding symptoms of coronavirus and instructions on whom to contact if they become symptomatic.
